

SOLUTIONS FOR MARKING PLATES

One of the most common industrial need is to affix a product with an **identification plate**. The plates must contain all the information relating to a piece and **must be indelibly marked**.

For this reason, we have developed **different solutions dedicated to the marking of plates**.

Depending on the quantity of plates to be marked and the needs of each customer, it is possible to choose the most suitable system: benchtop **stand alone units such as the Tags-Feeder** or **multi-stock solutions with a pick & place** system for loading/unloading each plate.

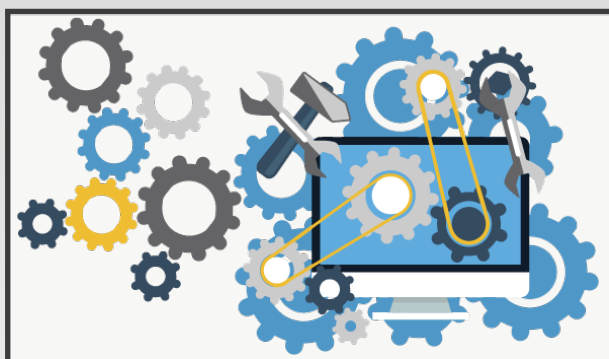

LASEREVO

We create **multi-stock solutions** equipped with a **pick and place** system for loading/unloading the plate. Our machines are completely **customizable on customer request**.

We provide **automatic solutions** that can interface with the factory software management in the context of Industry 4.0. It is possible to completely manage the machine from external control.

The benchtop **Tag-feeder solution**, equipped with an adjustable stock, allows you to mark plates of different sizes. Upon request, the solution can be equipped with a motorized stock to maintain the order of the marked plates.
